

# Dispatcher Phoenix Professional

## Benefits

### Ideal for All Business Environments, Print Shops & CRDs

#### Save time and money by automating manual, repetitive steps.

Including all of the features of Dispatcher Phoenix Foundations along with advanced features for power users, Dispatcher Phoenix Professional streamlines your most pressing, repetitive document processing tasks. Predefined workflows automatically perform file collection, processing, and distribution. And, with one click of a button, your most time-consuming, manual document processing tasks are completed quickly and easily.

#### Enhance your print production workflow by customizing print files automatically.

Dispatcher Phoenix Professional comes with a powerful set of file parsing tools that can evaluate, modify, and route files based on specific conditions that you've configured. Print jobs that usually involve multiple manual steps can be completely automated, freeing up valuable resources. For example, with a parser rule, you can insert a command into a print file to change the MFP's input tray when printing a specific page in the document.

#### Optimize business efficiencies with indexing and folder browsing at the panel.

Save time and improve your productivity by indexing and routing documents right from the MFP panel. You can browse through your PC's folder structure to choose a specific folder for your scan destination, enter a name or ID to identify the document, choose a document processing task to perform, and much more. And indexing becomes even speedier with the database lookup feature, which auto-populates other fields in the form based on a value entered or selected.

#### Control costs with advanced routing capabilities.

Automatically direct large jobs to more efficient high-volume printers, and route files to appropriate printers based on whether they are color or B&W.

#### Improve the organization/retrieval of documents.

Organize files based on their associated metadata, such as barcodes, Bates stamps, email header information, OCR results, etc. Metadata can also be automatically extracted from incoming files and stored in a separate file for later use in other systems.

#### Expand the application as needed.

Optional add-in modules are available to tailor and/or expand Dispatcher Phoenix Professional's capabilities (e.g., Advanced Bates Stamping, zonal OCR, PDF and Microsoft Office conversion, and more).
